

Overview

The SignStick® is a full Digital Signage Media Player that works with Discover Video's DEVOS Enterprise Video Management and related systems.

Simple

Just plug the SignStick into a conventional TV display via HDMI. Power the unit from a USB port on the display or from the included USB power adapter. Using a web browser, login to the unit and set the DEVOS Digital Signage address, and you are done.

Digital Signage

DEVOS supports an unlimited number of Digital Signage displays. Easily put a dynamic sign virtually anywhere. Put a sign in lobbies, hallways, common areas, lunch rooms, or anywhere people gather. You can even put a signage display outside of your local network and display your information at other buildings, even homes.

Economical

The SignStick is inexpensive and plays well with 3rd party devices.

Local Playback

SignStick receives digital sign content from DEVOS. The downloaded content can be played locally without being connected to the IP network.

Display

- Video
- Web content
- Images
- PowerPoint Slides
- Text
- Google Slides

Quality

- Up to High Definition video

Automatic

- Plug and Play simplicity
- Connects to DEVOS System

Benefits

- Built in Wifi & Ethernet

Companion Products

- DEVOS
- DV Express
- Streamsie®
- Arcus Streaming Services
- Roku Channels

Required Service

- SignStick is designed to work with DEVOS, DEVOS Stinger, or DV Express enterprise video management systems, or Arcus streaming service.

Streaming

Like modern streaming players from Roku, Amazon, Apple, and others, the SignStick plays your content via streaming from your DEVOS premises or cloud system.

Organizations

SignStick can be used in K-12 schools, universities, retail stores, businesses, government buildings and sports venues. Each SignStick can display its unique content.

HD/SD/Images/Web/RSS

The system displays live and VoD HD and SD content, playlists, web pages, images, etc. under control of the DEVOS system.

Manage

You manage all signage directly from the DEVOS system. But if you wish to access the SignStick directly it is very easy: Use the included Finder program and every SignStick on your network will be listed, just click on one to manage it. SignStick does not need a fixed IP address but you can assign one if desired.
